Bachelor's degree in

Computer Science
UFSCar

Languages

bilingual
portuguese/english

Programming

♥ Go

Python

Ruby

Java, C, C++

Bash

Intro

I'm a generalist software developer and a strong supporter of open source.

My main career goals are to learn new things (ideally bleeding edge tech) and to improve myself.

Recently, I'm focusing on developing (and designing/planning) highly performant **Go** apps in a microservices, event-driven architecture.

From my past, I have solid experience with **hadoop** based solutions (the whole ecosystem) and had my share of developing complex parsers in **C**.

As for most automation tasks, I'm a **python** adept (except when a problem can be solved by a **bash** oneliner).

Some of my interests

Rust, operational systems, distributed computing, low-level network development, web development

Experience

aug/2019

present

iFood, São Carlos

Backend Developer

Backend software developer with a strong focus in large scale API's and async messaging

- Go and Kotlin (Spring and Ktor) specialization.

- Huge dive into amazon products: from messaging to lambdas, terraform provisioning and hosted opensource products

- Got intoxicated (in a good way) by a lot of best practices gurus and "RFC culture"

- Mentoring/training, interviewing and leadership experience

jul/2017

aug/2019

WebRadar, RJ

Backend Software Developer (Remote)

Software developer and DevOps in a BigData project.

- Came up with logging and monitoring strategies for the whole solution.

- Java development (DropWizard, Spark)

- Ruby development (Rails)

- Bash and python for automation

mar/2016

jun/2017

Daitan Group, Campinas

Software Development Specialist

Software developer and DevOps in a BigData project.

- Parsers in C

- Provisioning with Chef and Docker

(see my linkedin for more!)
